

Student Instructions for Motor and Solar Panel Installation

MATERIALS NEEDED FROM STUDENT KIT:

- Bushing
- Motor
- Motor holder
- Smaller gear
- Solar panel
- Velcro tape

Instructions:

1. Put the bushing on the stub of the motor.
2. Put the smaller gear on the bushing to secure it to the stub.
3. Clip the motor into the holder.
4. Place the smaller gear next to the larger gear on the wheel so that the teeth intertwine.
5. Remove the tape from the bottom of the holder and place it carefully on the chassis (car body) so that when it is stuck in place the two gears cause each other to move.
